

No-Loss Mineral Frequency Infusion

Your water enhancement unit contains a sealed PVC wrap-around canister filled with highly photonic minerals. Through our research we have found that these minerals do not need to come in contact with the water to positively affect the water. Just passing by in close proximity imparts their specific mineral frequencies into the water. In the natural water purification cycle, minerals are one of the main cleansing and elements of pure, clean water.

This image is still shot of a mineral taken from a GDV camera video during our research.

Biomimicry

Greenfield Water originally started out to develop a water enhancement unit that did not need constant replacement parts and would mimic the water purification process found in nature to the highest degree. The Water Enhancement products of Greenfield Naturals are all designed around the concept of biomimicry. We have intentionally stayed away from any kind of a non-natural enhancement ingredient, or the need to replace filters or parts at periodic intervals with this unit. We have designed our products to mimic nature to the highest degree possible.

GREENFIELD WATER POOL VORTEXOR

The GREENFIELD WATER POOL VORTEXOR is designed to be installed into the recirculating loop of a standard size swimming pool pump system using 2" PVC pipe.

The POOL VORTEXOR consists of two flow through tubes containing multiple rows of triangular set glass spheres providing the water with a natural vortexing action as is found in nature. The unit has two external cartridges which contain an aqueous crystalline solution specifically formulated for high photonic emissions which will enhance the cleansing effect of your water. This structuring device never needs replacement of the minerals or contents.

Installation Instructions

The POOL VORTEXOR is bidirectional and may be installed with water flowing in either direction. It is designed for easy installation into your pool's recirculation system.

These instructions are per typical plumbing methods. Actual Installations must be adapted to individual requirements and regional codes. We have made every effort to ensure accuracy and reliability of the information, instructions, and directions. However, neither the dealer nor the manufacturer will accept responsibility for misinterpretation of the directions or human error.

1. Turn off your pool pump.
2. Locate the unit anywhere within your recirculation line where there is adequate length of line to insert the unit.
3. Cut out a section of pipe from your system allowing for a connection using PVC Schedule 40 Union Couplers on each end or directly gluing pipe into each slip end.
4. Once installed your POOL VORTEXOR will provide you with many years of faithful service without additional expense, parts replacement or filter changes.

WHAT ARE THE BENEFITS OF THE POOL VORTEXOR?

- Use of chemicals reduction by 30%
- Improved pump performance
- Less filter maintenance
- Pool coping stays cleaner
- Chlorine odor reduction
- Annoying effects of chemicals on body mitigated
- Overall more enjoyable swimming experience
