

## GREENFIELD WATER POOL VORTEXER

### Benefits

- Use of chemicals reduction by 30%
- Improved pump performance
- Lowers pump operating pressure
- Less filter maintenance
- Pool coping stays cleaner
- Chlorine odor reduction in pool area and from towels and bathing suits
- Annoying effects of chemicals on body mitigated
- Overall more enjoyable swimming experience

### The Powerful Influence of Vortex Actions

The Pool Vortexer consists of two flow through tubes containing multiple rows of triangular set glass spheres providing the water with a natural vortex action as is found in nature. It is designed to be installed into the recirculating loop of a standard swimming pool pump system facilitating a continual vortex action which creates thinner water, reducing friction, improving filtration, breaking down scum and contaminants while also correcting malformation resulting in a more naturally configured chlorine molecule.

### No-Loss Mineral Frequency Infusion

Your water enhancement unit also contains sealed PVC wrap-around canisters filled with an aqueous crystalline solution specifically formulated for optimal frequency emissions which will enhance the cleansing effect of your water. Through our research we have found that these minerals and elements do not need to come in contact with the water to positively affect the water. Just passing by in close proximity imparts their specific elemental and mineral frequencies into the water. In the natural water purification cycle minerals and elements contribute to the cleansing of water. This structuring device never needs replacement of the minerals or contents.

## **Biomimicry**

Greenfield Water originally started out to develop a water enhancement device that did not need constant replacement of parts and that would mimic the water purification process found in nature to the highest degree. The Water Enhancement products of Greenfield Naturals are all designed around the concept of biomimicry. We have intentionally stayed away from any kind of a non-natural enhancement ingredient or the need to replace filters or parts at periodic intervals with this unit. We have designed our products to mimic nature to the highest degree possible.

## **Installation Instructions**

The Greenfield Water Pool Vortexer is designed to be installed into the recirculating loop of a standard size swimming pool pump system using 2" PVC pipe. The unit is bidirectional and may be installed with water flowing in either direction. It is designed for easy installation into your pool's recirculation system. Be sure to prime each fitting before welding together with PVC glue. These instructions are per typical plumbing methods. Actual Installations must be adapted to individual requirements and regional codes. We have made every effort to ensure accuracy and reliability of the information, instructions, and directions. However, neither the dealer nor the manufacturer will accept responsibility for misinterpretation of the directions or human error.

1. Turn off your pool pump.
2. Locate the unit anywhere within your recirculation line where there is adequate length of line to insert the unit.
3. Cut out a section of pipe from your system allowing for a connection using PVC Schedule 40 Union Couplers on each end or directly gluing pipe into each slip end.
4. Once installed your POOL VORTEXER will provide you with many years of faithful service without additional expense, parts replacement or filter changes.

## **Warranty**

Your Water Enhancement unit will never require changing filters and has no moving parts to wear out. Your Water Enhancement unit is backed by a 90 day, 100% unconditional, money back guarantee and comes with a 1-year replacement warranty. This product should last the lifetime of the pool onto which it is installed.
