Case Study

Preventing Scale in a Brewery

The Opportunity

The Warped Wing Brewing Company opened a new production facility in Dayton, Ohio in 2014. Aware of hard water scaling issues in the area (total hardness 175 ppm), they researched various options seeking a cost effective environmentally friendly means to prevent scale accumulating in their systems.

Warped Wing selected Fluid Dynamics with their proven scale prevention technology. Fluid Dynamics has been in business since 1973 and has worked with a number of breweries over the years including:

The Solution

A Fluid Dynamics ¾" Scaleton was installed on the feed line to the property and a 1" Scaleton was installed on the recirculating line of their boiler system.

The Results

The boiler was inspected as part of the customers planned maintenance schedule after one year and the boiler was found to be free from any scale deposits. Wash down areas and other parts of the system that are normally susceptible to hard water issues were again found to be scale free.

Benefits

Utilizing chemicals near food/ingredients is a valid cause for concern and could potentially result in an elevated risk control assessment influencing insurance costs.

The use of Fluid Dynamics chemical free water conditioners reduces the amount of chemicals on site and the associated risk of contamination or injury.

Customer Savings

- Reduced maintenance
- No salt consumption
- Reduced energy costs
- Reduced water consumption
