

Kitchen Appliances

Customer: Boulder Station Las Vegas, NV

Category: Commercial

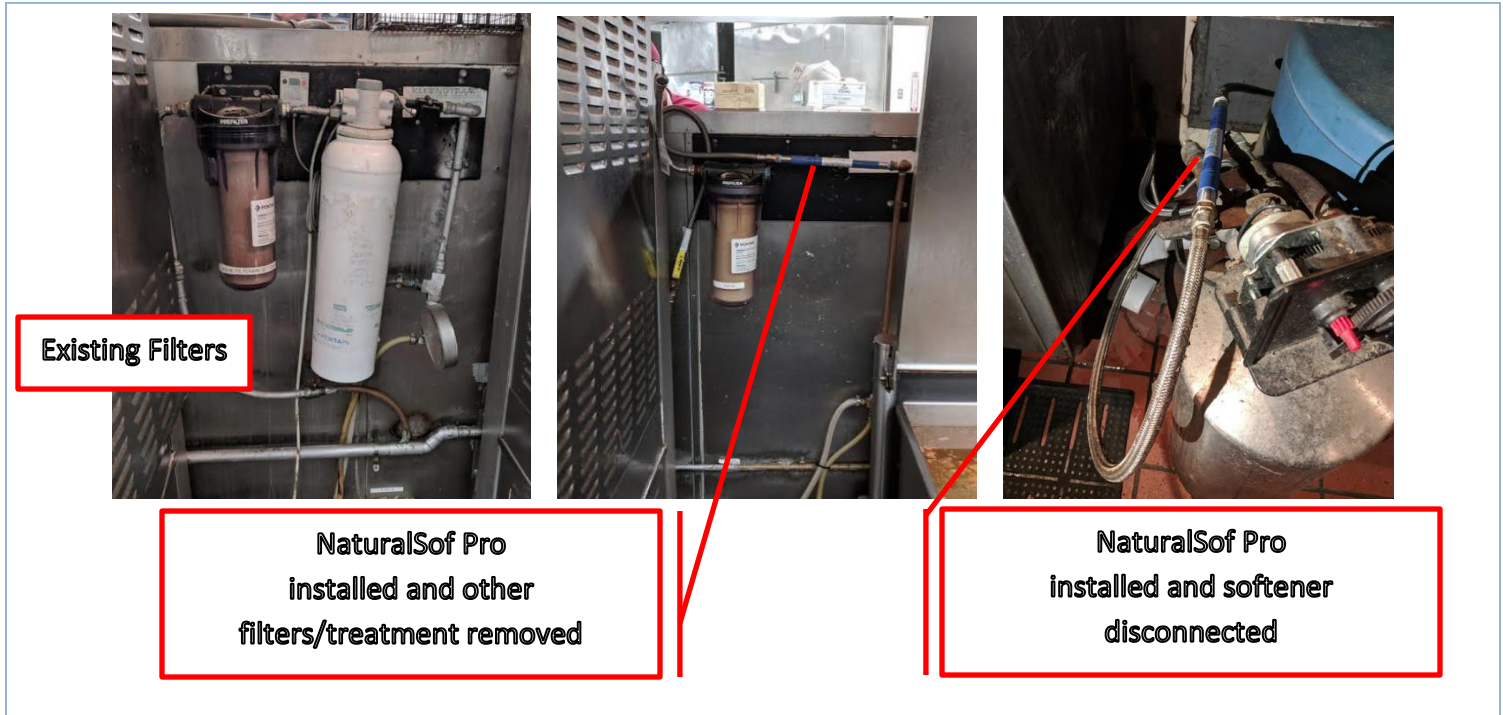

Application: Steam Oven & Glass Washer

The Challenge: **Steam Ovens:** These are some of the toughest appliances to protect from calcium limescale caused by hard water. In addition to keeping the ovens clean, the units also have servo mechanisms and fill level sensors that get scaled rapidly and needed weekly, manual attention to keep the ovens functioning. Since there were two ovens alongside each other a side-by-side test was the perfect challenge.

Glass Washer: Hard water readily precipitates calcium scale inside of dish and glass washers. Brewer's bar was no exception. An ageing point of use softener offered the perfect opportunity to try a new technology to protect and clean up the glass washer.

The Solution: NaturalSof Pro units were installed in the feed lines to each piece of equipment. Below are pictures of prior treatment and the current NaturalSof units:

Results: Excellent results within the first few weeks are pictured below:
